Abstract

A social networking service (also social networking site or SNS) is a platform to build social networks or social relations among people who share similar interests, activities, backgrounds or real-life connections. A social network service consists of a representation of each user (often a profile), his or her social links, and a variety of additional services such as career services. Social network sites are web-based services that allow individuals to create a public profile, create a list of users with whom to share connections, and view and cross the connections within the system. Most social network services are web-based and provide means for users to interact over the Internet, such as e-mail and instant messaging. Social network sites are varied and they incorporate new information and communication tools such as mobile connectivity, photo/video/sharing and blogging. Online community services are sometimes considered a social network service, though in a broader sense, social network service usually means an individual-centered service whereas online community services are group-centered. Social networking sites allow users to share ideas, pictures, posts, activities, events, and interests with people in their network.

Traveling is made easy with the help of e-commerce which makes us very helpful in hassle free journeys and travels. [**ejaazshaik**](#) is a travel companion which is unique from the others since it locates the user's location and helps him to find the nearest happenings, stores and their respective offers. Also on the other hand it helps in building social relations with persons all around the globe, which indeed serves as a one stop destination for every need.

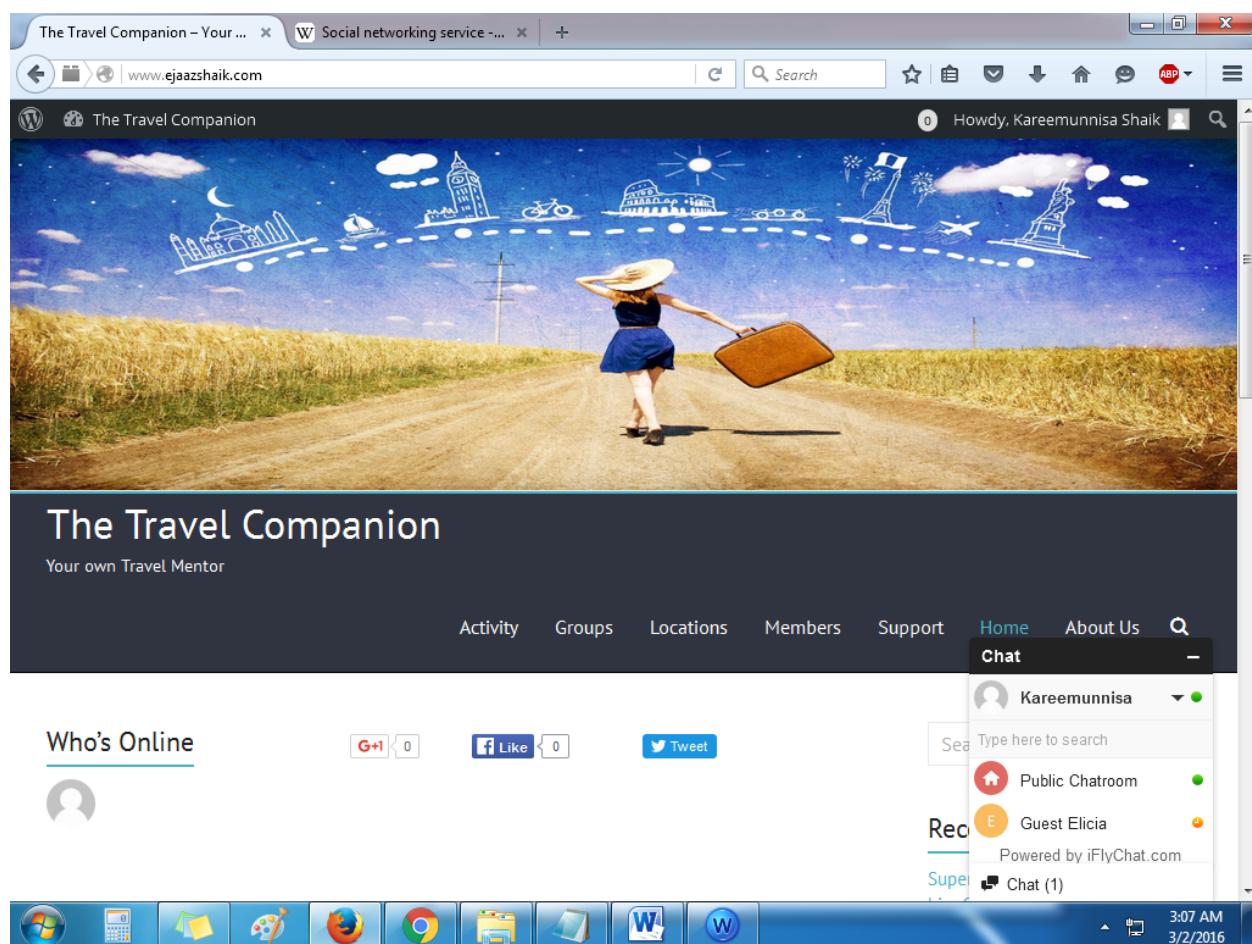

Objective

The primary objective of the project is to design a website which works as a TRAVEL MENTOR for a customer. The idea behind developing this website is to provide customer the freedom to choose what is happening around him. Also on the other hand the user can experience the networking vibe with different options such as the Activities, Groups and Members pages by logging into the website.

Explaining Different Pages:

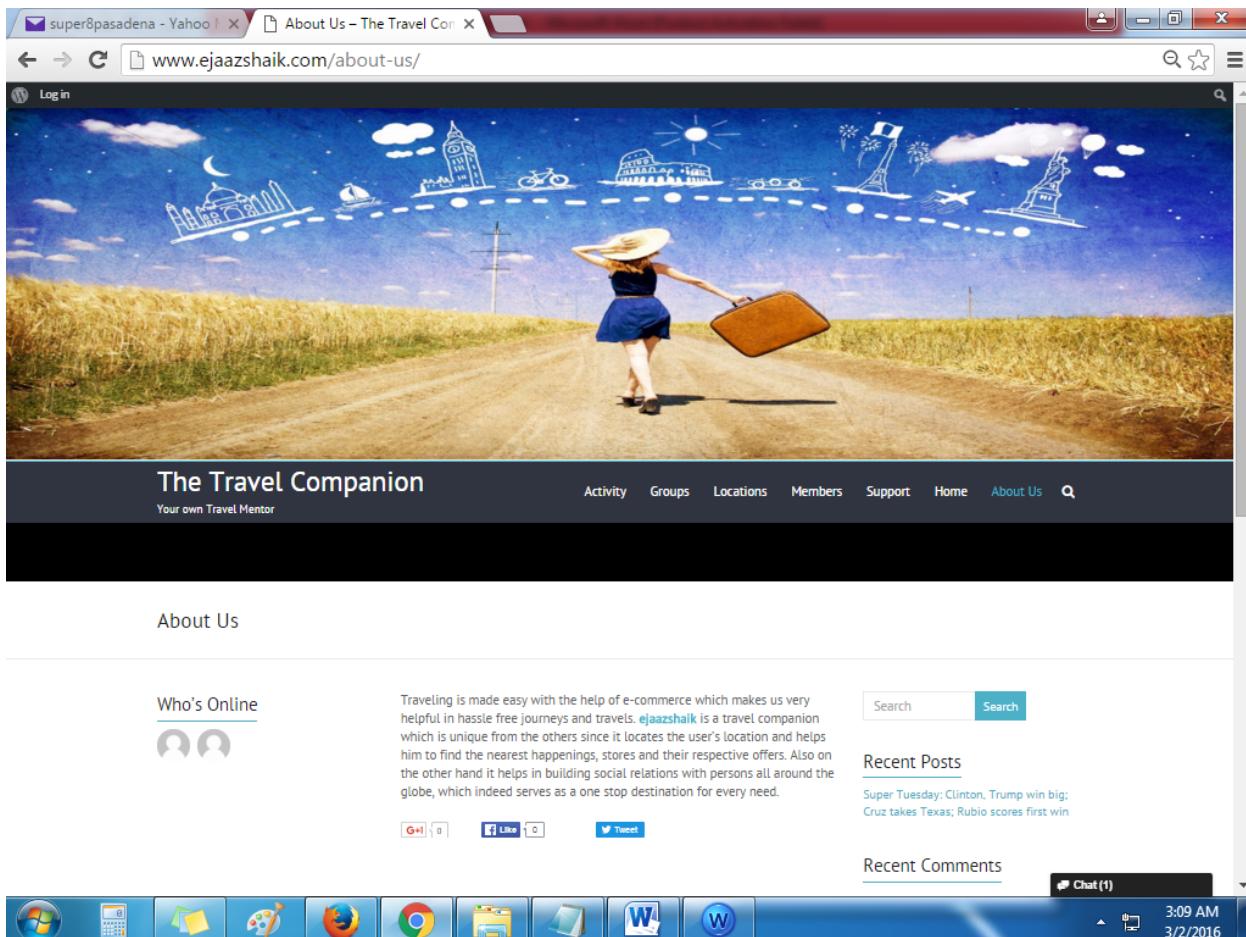

Home:

This page is the landing page for a user once he enters the address www.ejaazshaik.com. This page is designed by installing Wordpress on my domain and by adding a new page option which is made available after installing Wordpress. This page has a fancy image which depicts the definition of our website. The header of the website is edited by a fancy image through theme options of the Wordpress. Following is how the page looks,

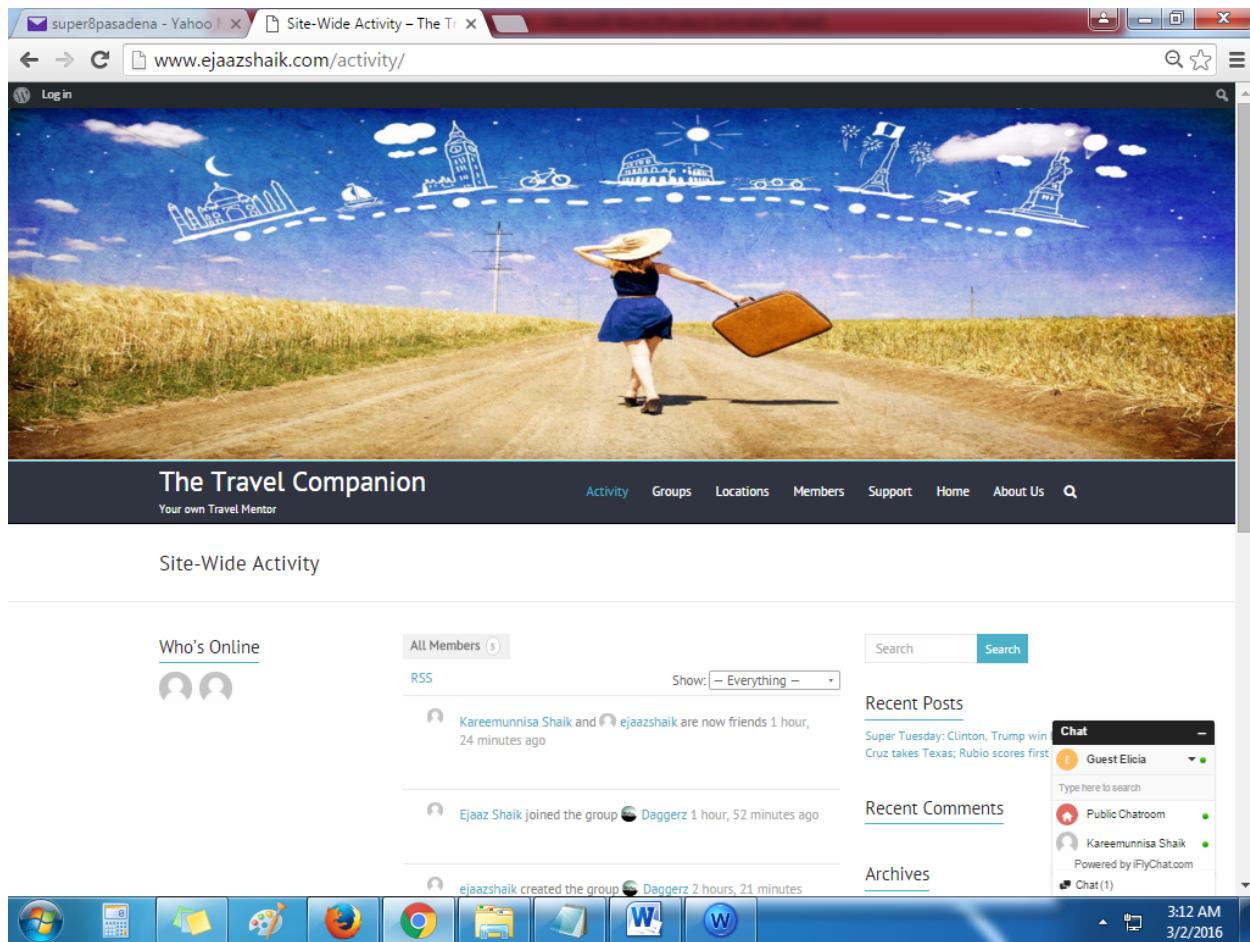

About Us:

This page is added in the dashboard of Wordpress by logging into the website as admin. *About Us* page describes about why this website is built for. The following is how the webpage of *About Us* looks like,

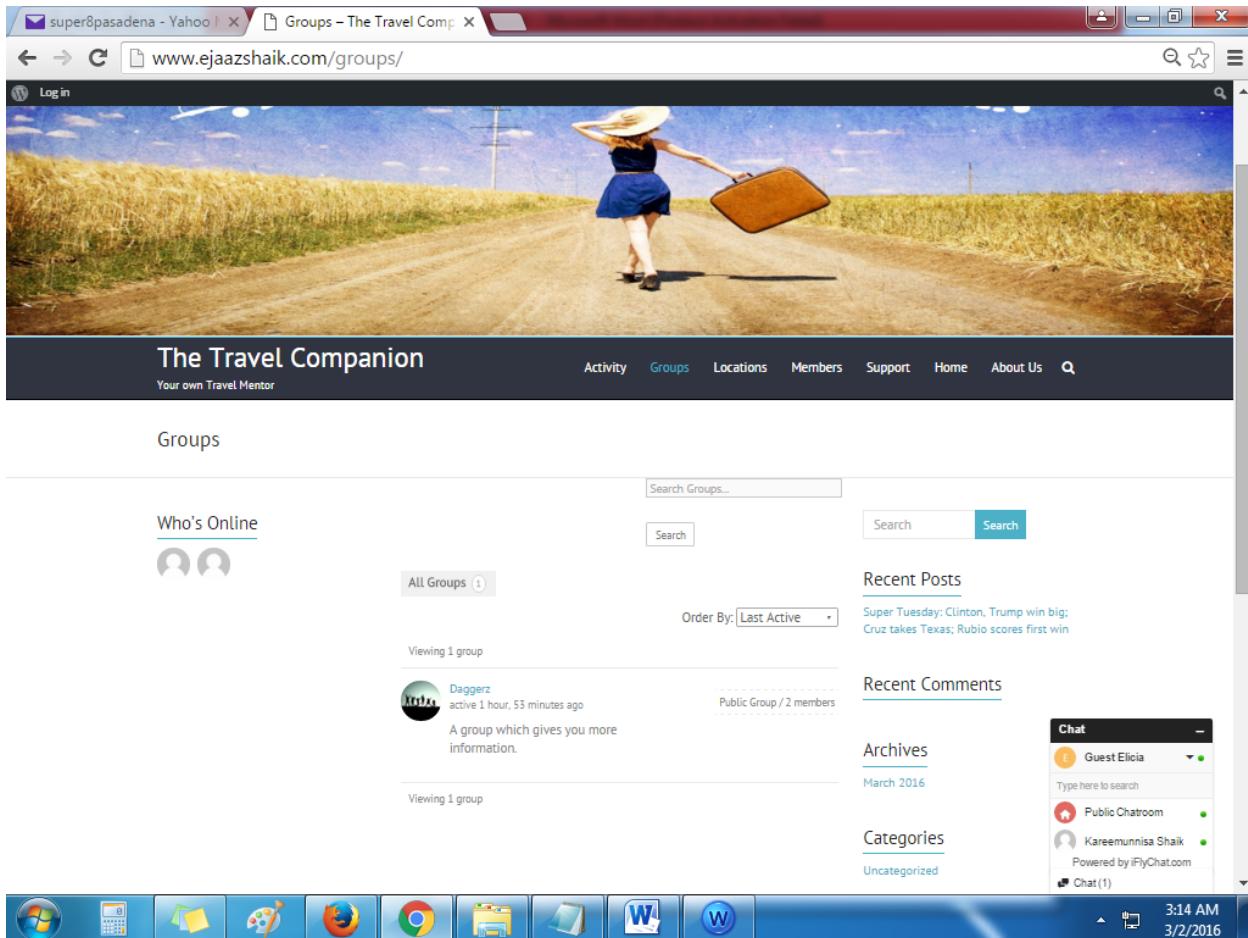

Activity:

There is a plugin named *buddypress* which is installed in the website which helps us in building the networking option for the user. For now the page is just added, later developments needs to be added as per plan. This page helps the user to find out the activities which are happening nearby and also the other users who are logged in to our website. On the whole this is a page where everyone can see the other's recent activities. Page screenshot follows,

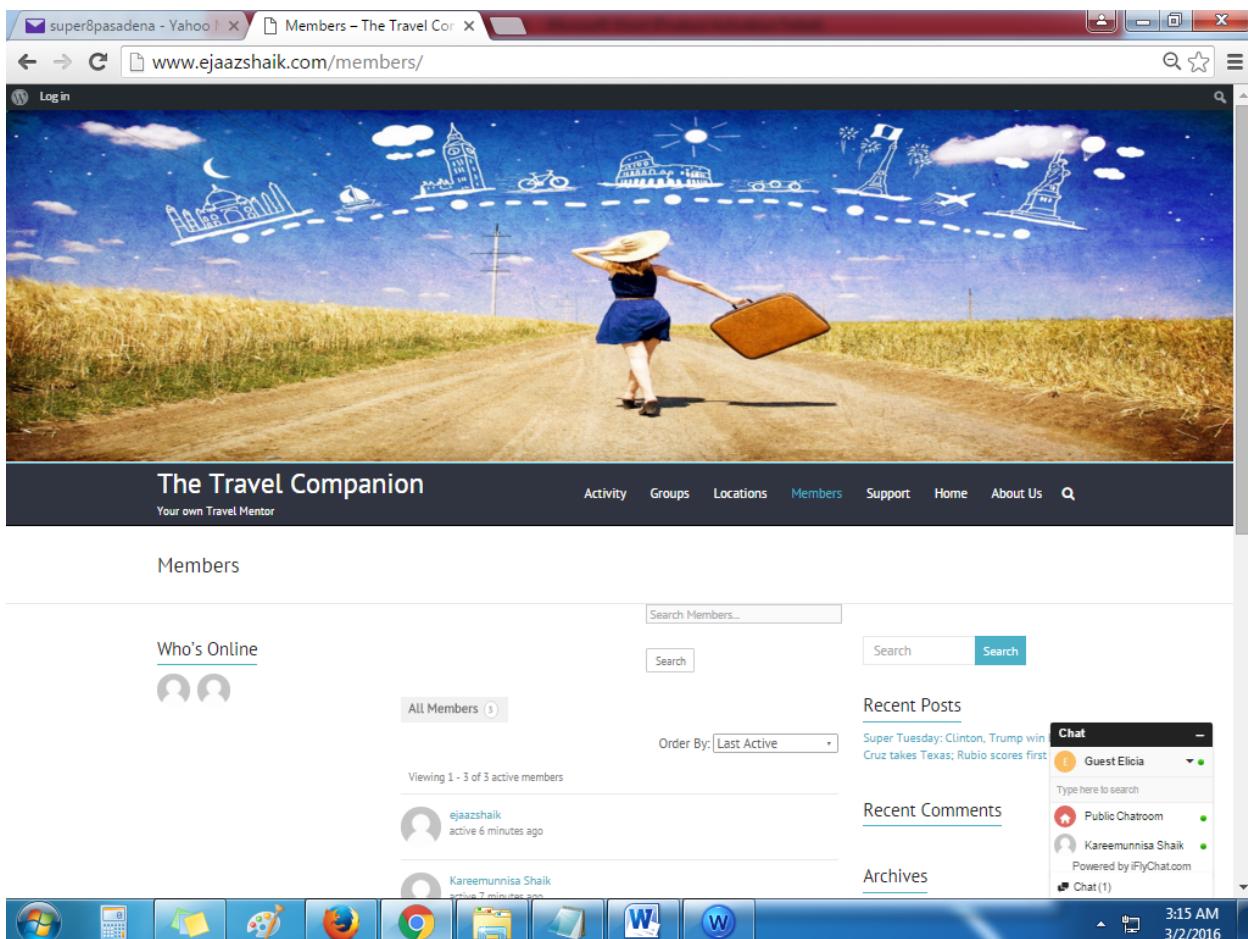

Groups:

We have a privilege for the user in order to view different groups and also they can add themselves to the desired group. This page is added using the *buddypress* plugin. Also it lists out the public groups which are available to join which in turn helps the users to stay updated what's happening nearby. Primary look and feel follows,

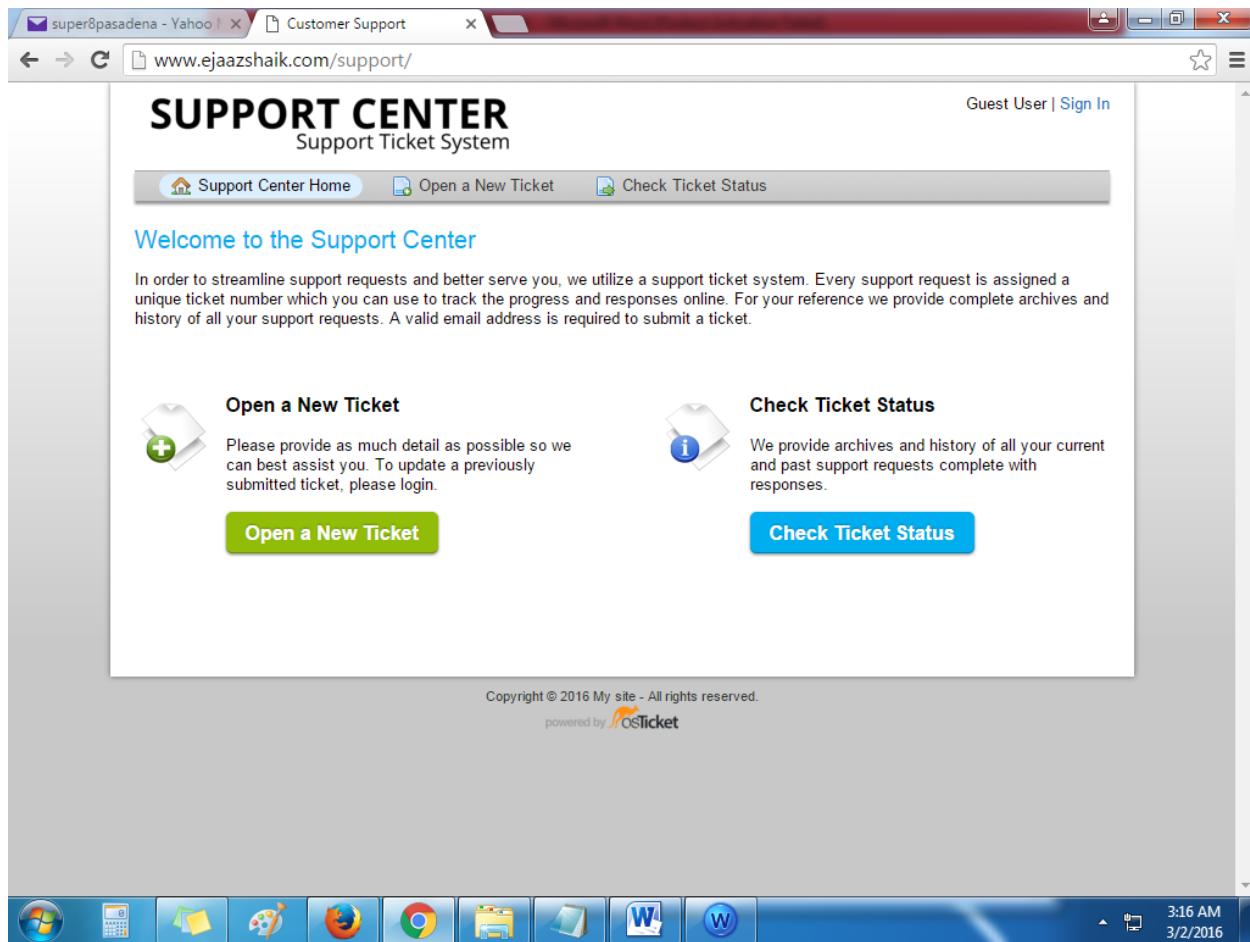

Members:

A user can check for the members who are logged in to the website. All active members are listed in this page through which the user can have an idea who is active and who is not. This page has been added with the help of *buddypress* plugin. Screenshot follows,

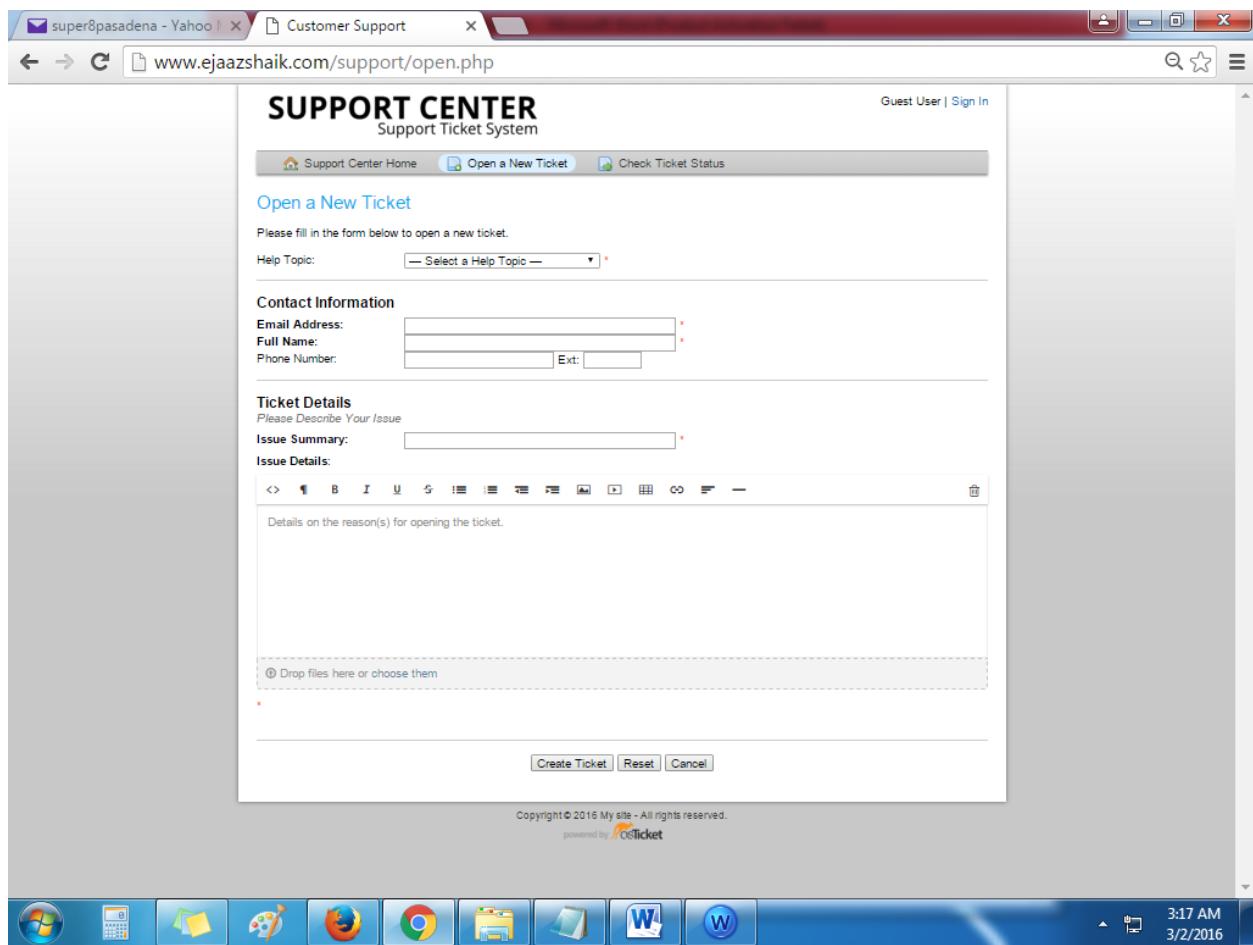

Support:

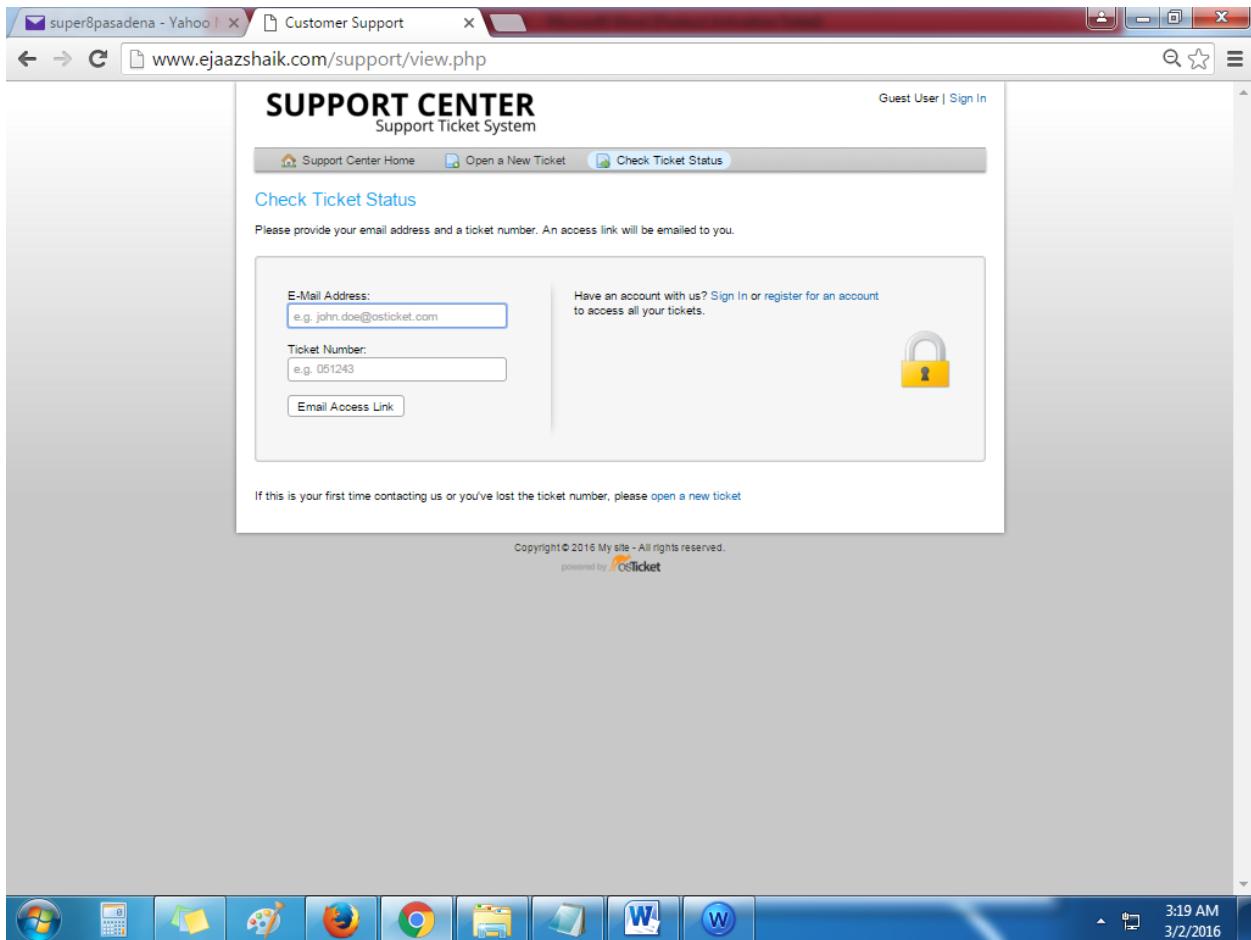

A support page has been added rough an application named **osTicket**. This application helps a customer to raise a ticket if they face any issue, it may be in technical aspect or in a non-technical, and also on the other hand they can check for the status of the ticket which has been raised. By clicking on this page, user will be taken to a different landing page where they have the provision to select two options. This is how the landing page looks,

One is to open a new ticket and the other is to check ticket status. Once the user press for opening a new ticket, it takes us to a new page where few details are needed to be filled out. This UI is achieved with the help of application osTicket. Once the user fills out all the details then after selecting the button *create ticket* a ticket will be created. Screenshot follows,

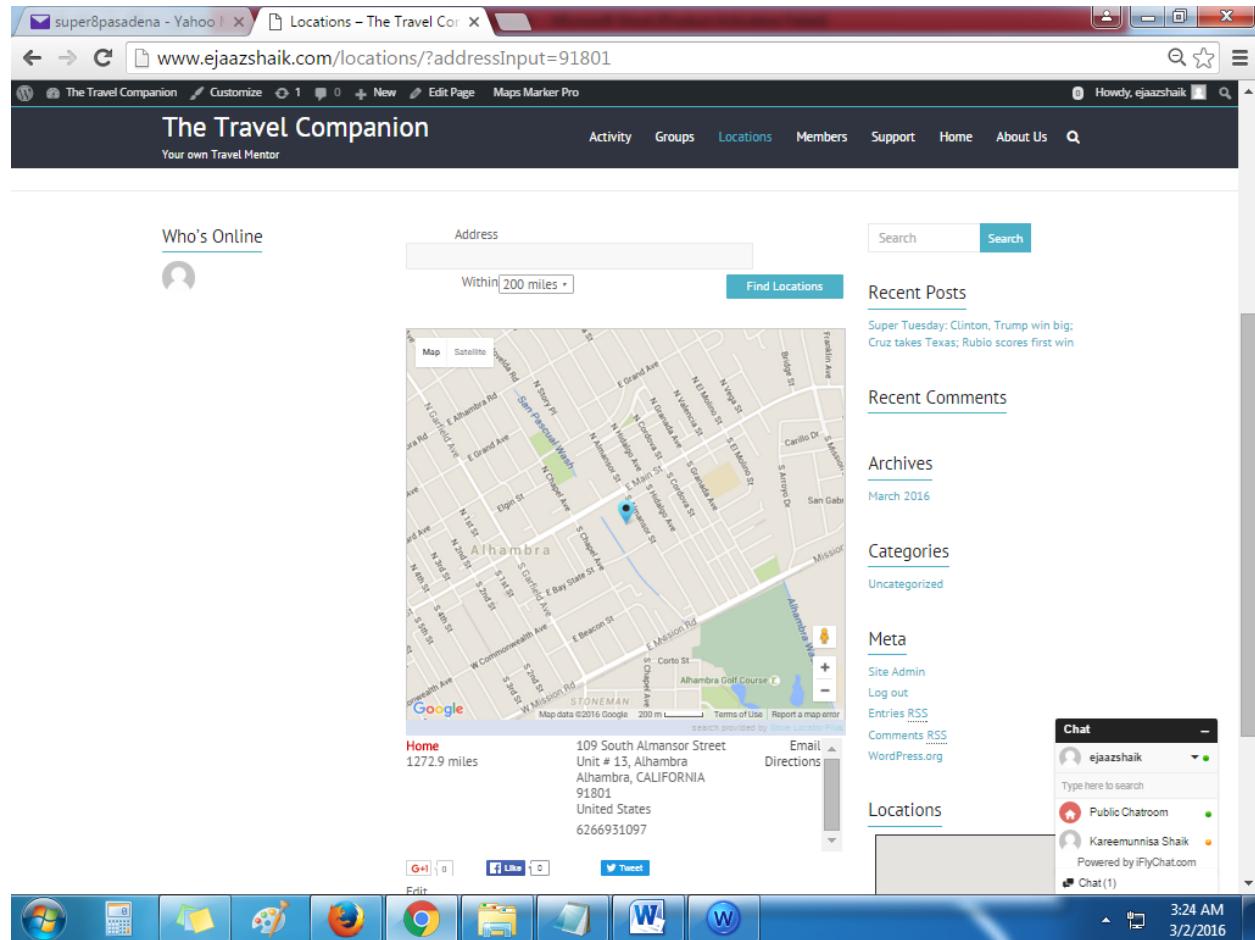

The *check ticket status* link allows a user to enter email address which was given at the time of creating a ticket and the ticket number which was mailed to the email address. This support center page also have an option to a user to login in to the portal and check for the ticket status. An access link will be sent to the registered mail address, there on user can check the ticket status by clicking on the link. Screenshot of *check ticket status* is as follows,

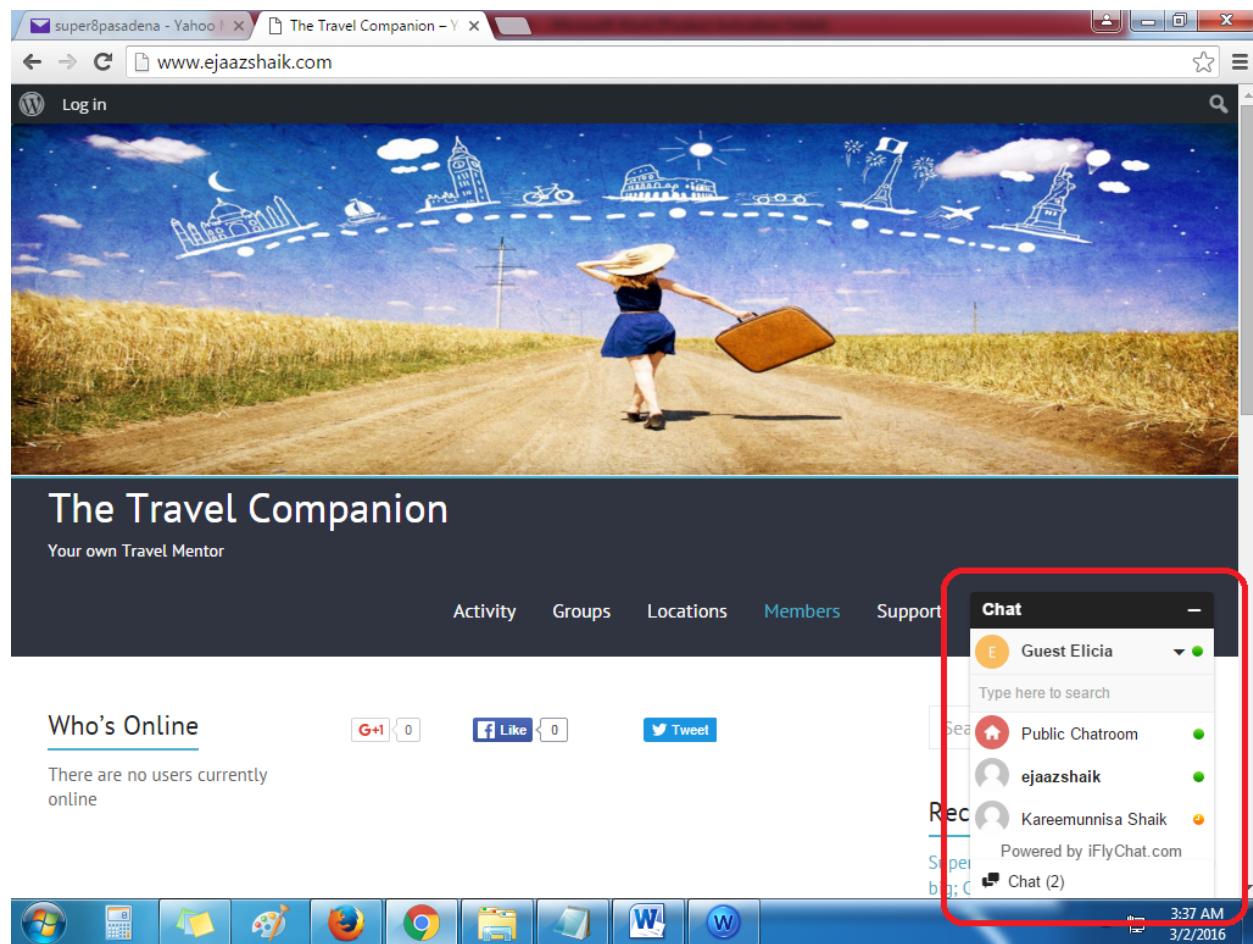

Locations:

This page is created once the Wordpress is installed. Using the plugin *Store Locator Plus* which helps to find a particular place for the user rather than searching in the Google maps in a new window. Maps have been integrated into the website for user convenience. Screenshot as follows,

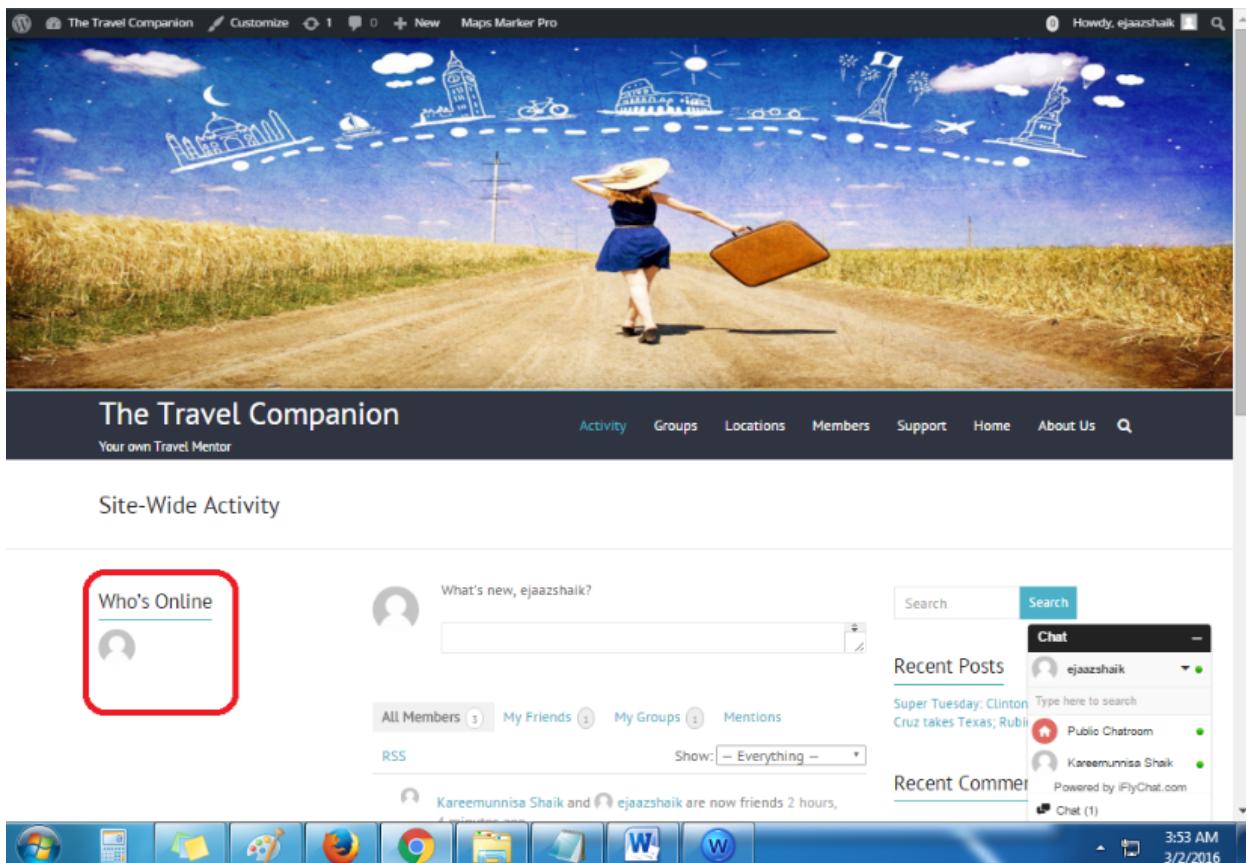

Chat Service in all the pages:

This is a chat service in all the pages enabled for the users to chat with the other visitors of the website. They can be their friends or just a guest. The people who are not in their friends list will be shown with a suffix name *Guest*. There are also public chatrooms which will help the users to engage in public chats. This service is integrated with the help of *iFlyChat* plugin which was downloaded from the plugin store. Screenshot foregrounding the chat service is as follows,

Who's Online:

There is a widget named Who's Online which will help the users to find out who is online. This widget is added with the help of the installed theme from the WordPress theme store. Screenshot is as follows,

Plugins installed:

Akismet:

Akismet is quite possibly the best way in the world to **protect my blog from spam**. It keeps my site protected even while I am sleep. Not yet activated.

BuddyPress:

BuddyPress is any kind of social network on my WordPress, with member profiles, activity streams, user groups, messaging, and more.

Clef:

Clef lets you log in and register on your WordPress site using only your phone — forget your usernames and passwords.

Contact Form 7:

It's just another contact form plugin. Simple but flexible.

Disable Comments:

This helps administrators to globally disable comments on their site. Comments can be disabled according to post type.

Exclude Pages from Navigation:

It provides a checkbox on the editing page which you can check to exclude pages from the primary navigation.

Go Daddy Quick Setup:

It gets your site started in ten minutes by answering some easy questions. Use our beautiful themes and popular plugin configurations to get your website started quickly.

Google Analytics:

This enables Google Analytics on all the pages.

Hello Dolly:

This is not just a plugin, it symbolizes the hope and enthusiasm of an entire generation summed up in two words sung most famously by Louis Armstrong: Hello, Dolly. When activated, you will randomly see a lyric from Hello, Dolly in the upper right of your admin screen on every page.

iFlyChat:

This is one on one chat, multiple chatrooms and embedded chatrooms

Limit Login Attempts:

Limit rate of login attempts, including by way of cookies, for each IP.

Maps Marker Pro:

The most comprehensive & user-friendly mapping solution for WordPress.

Really Simple CAPTCHA:

Really Simple CAPTCHA is a CAPTCHA module intended to be called from other plugins. It is originally created for my Contact Form 7 plugin.

Simple Page Ordering:

Order your pages and hierarchical post types using drag and drop on the built in page list. For further instructions, open the "Help" tab on the Pages screen.

Simple Social Buttons:

Insert social buttons into posts and archives: Facebook "Like it", Google Plus One "+1", Twitter share and Pinterest.

Spacer:

It adds a spacer button to the WYSIWYG visual editor which allows you to add precise custom spacing between lines in your posts and pages.

Store Locator Plus:

Add a location finder or directory to your site in minutes.

Plugins screenshot:

The following screenshot shows the list of plugins installed on the website.

The image contains two side-by-side screenshots of a computer monitor displaying the WordPress admin dashboard. Both screenshots show the 'Plugins' section of the 'Installed Plugins' tab. The top screenshot shows a list of 19 installed plugins, while the bottom screenshot shows a list of 18 installed plugins. The plugins listed include 'Akismet', 'BuddyPress', 'Chat by Flyzoo - Group Chat & Live Support', 'Clef', 'Comprehensive Google Map Plugin', 'Contact Form 7', 'Disable Comments', 'Exclude Pages from Navigation', 'GoDaddy Quick Setup', 'Google Analytics', 'Hello Dolly', '#fChat', 'Limit Login Attempts', 'Maps Marker Pro', 'Really Simple CAPTCHA', 'Simple Page Ordering', 'Simple Social Buttons', 'Spacer', and 'Store Locator Plus'. Each plugin entry includes a checkbox, a link to its settings, and a link to view its details. The interface features a standard Windows taskbar at the bottom with icons for various applications like Mail, Calendar, and File Explorer.
